PROFESSIONAL SUMMARY

- 2025 B.Tech (Information Technology) graduate with hands-on Full Stack Developer experience designing, querying, and optimising **relational and NoSQL databases** (MySQL, MongoDB) to support production reporting and application features. Proficient in **SQL** and multiple programming languages including **Java, Python, C, C++**, and JavaScript/TypeScript, with practical experience in **debugging, unit testing, Git-based version control** and PR-driven code review. Comfortable gathering requirements directly from stakeholders, estimating and planning work, and shipping enhancements within existing software architectures. Strong CS fundamentals in data structures, algorithms, and database design, backed by 950+ problems solved across LeetCode, GeeksforGeeks, and Coding Ninjas. Eager to build foundational knowledge of healthcare workflows and the Millennium data model, and to grow into a collaborative, detail-oriented contributor on a product engineering team.

TECHNICAL SKILLS

Programming Languages: Python, C, C++, JavaScript (ES6+), TypeScript, HTML5, CSS3

Databases: SQL, MySQL, MongoDB (schema design, aggregation pipelines, query optimisation), Mongoose

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Design, Complexity Analysis

Data & Reporting: Data analysis and processing pipelines, Excel/bulk-data parsing and validation, report generation from structured data

Backend & APIs: Node.js, Express.js, RESTful API design, JWT/OAuth, OTP Authentication

Testing & Debugging: Unit testing, root-cause analysis & debugging of production issues, Postman (API testing/documentation)

Version Control & Practices: Git/GitHub (PR workflows, code review), Agile/Scrum, Linux/RHEL, Docker, Podman, Bash scripting

CODING PROFILES

- **LeetCode:** [uttam654842](#) (200+) | **GeeksForGeeks:** [uttamgu8q69](#) (400+) | **Coding Ninjas:** [uttam0914](#) (350+) — 950+ problems total

EXPERIENCE

ASR Tech Solution

Feb 2025 – Present

Full Stack Developer

- Designed and optimised **database schemas and queries** across MySQL and MongoDB for multi-tenant, multi-role platforms (admin, merchant, user, driver), improving **data integrity** and lookup/report performance.
- Built **data processing and reporting pipelines** — bulk-data upload/validation scripts, pricing-consistency checks, and Postman-based API documentation — to reduce manual operations work and surface accurate data to stakeholders.
- Performed **debugging and root-cause analysis** on distributed-system issues in production (OAuth redirect handling, session staleness, price-sync consistency), documenting findings and resolutions.
- Wrote and maintained **unit tests** and used **Git/GitHub PR workflows** for change management (feature branching, code review, staged rollout), minimising downtime and regressions on live deployments.
- Gathered requirements directly from stakeholders, estimated scope, and planned and executed backend features and RESTful APIs (authentication, booking management, third-party integrations) within an existing software architecture.
- Collaborated cross-functionally with product and QA, communicating status and technical trade-offs clearly across teams.

PROJECTS

BinIQ — Bin Store Management Platform (USA) | React, Node.js, MongoDB, SQL, Excel parsing | [User App](#) | [Store App](#)

- Built a **bulk store data upload and validation pipeline** with header parsing, deduplication, and data-consistency checks for reporting; implemented **OTP-based auth** backed by structured database queries.

Vervoer — Parking & Laundry Services Platform | Node.js, MongoDB, Stripe, React Native | [Play Store](#)

- Architected the complete backend with RESTful APIs for auth, merchant management, and booking flows; designed a **daily-rate pricing algorithm** validated end-to-end and documented it in **Postman** for team-wide use.
- Debugged and resolved **data-consistency defects** between frontend and backend pricing calculations to eliminate payment mismatches.

Aabhya Foundation — Charity/NGO Platform | *React, Node.js, Express, MongoDB, Stripe*

- Built a full-stack **donation and reporting module**, integrating Stripe and UPI/QR payment flows with database-backed status tracking and volunteer record management.
- Deployed and operated the backend on Render with MongoDB Atlas, resolving **database connectivity and DNS configuration** issues to ensure reliable production uptime.

EDUCATION

Jalpaiguri Govt. Engineering College	West Bengal, Jalpaiguri
<i>B.Tech — Information Technology</i>	<i>2021 – 2025</i>

CERTIFICATIONS

Red Hat Certified System Administrator (RHCSA)	Certificate ID: 260-022-561
---	-----------------------------

- Linux system administration, **systemd** service management, container fundamentals with **Podman**, and **Bash automation scripting** for operational tasks.
